

# AI Coding Command Prompt - IEEC YA Connect

Status: READY for coding (Architecture Baseline v1.0 - planning freeze)

Use: Open a new Cursor coding agent / different Cursor account, paste everything below the line, and point it at this repo.

Planning agent does not write application code. This prompt is for the implementation agent only.

---

## YOUR ROLE

---

You are implementing IEEC YA Connect, a people-centered Young Adult ministry platform.

- Follow the planning docs in this repository exactly.
  - Do not redesign architecture, roles, workflows, data model, or RBAC.
  - If something is missing or ambiguous, ask the human - do not invent product policy.
  - This coding session is separate from the planning agent that wrote docs/.
- 

## SOURCE OF TRUTH (read in this order)

---

### Highest authority

1. docs/SOURCE\_OF\_TRUTH.md
2. docs/handbook/IEEC\_YA\_Connect\_Architecture\_Handbook\_v0.3.pdf  
(searchable: docs/handbook/Architecture\_Handbook\_v0.3.md)
3. Handbook drafts Ch. 4-13 under docs/handbook/Chapter\_\*.md
4. ADRs: docs/adr/ (ADR-001...007 + ADR-RBAC-001...003)

If a module doc conflicts with the handbook/ADR, handbook/ADR wins.

### Supporting ChatGPT threads (detail only)

Phase | Link | Rule

Steps 1-2 | <https://chatgpt.com/share/6a54d9c0-23d4-83ea-b8d6-6e3675729fbd> | Use only BEFORE user message Give me over all content from step 1 and step 2 in pdf

Follow-Up Step 3+ | <https://chatgpt.com/share/6a54dabb-eca4-83ea-b88e-fdae1dd5d0ff> | Module detail

Prefer repo docs under docs/modules/ over re-deriving from ChatGPT.

### Required reading before coding

- docs/architecture/00-platform-blueprint.md
- docs/architecture/90-ai-development-guide.md
- docs/handbook/Chapter\_04\_People\_and\_Account\_Model.md
- docs/handbook/Chapter\_05\_Identity\_and\_Authentication.md
- docs/handbook/Chapter\_06\_Authorization\_and\_Permission\_Engine.md
- docs/handbook/Chapter\_07\_Dynamic\_Forms\_Engine.md
- docs/handbook/Chapter\_08\_Workflow\_Engine.md
- docs/handbook/Chapter\_09\_Ministry\_Calendar\_Engine.md
- docs/handbook/Chapter\_10\_Chat\_and\_Collaboration.md
- docs/handbook/Chapter\_11\_Notifications\_and\_Tasks.md
- docs/handbook/Chapter\_12\_Audit\_and\_History.md
- docs/handbook/Chapter\_13\_Data\_and\_Engineering\_Standards.md
- docs/modules/follow-up.md
- docs/modules/follow-up-workflows-and-state-transitions.md
- docs/modules/follow-up-firestore-data-model.md

- docs/modules/follow-up-permission-catalog.md
  - docs/modules/follow-up-config-defaults.md
- 

## PRODUCT & STACK (settled - do not reopen)

---

Layer | Choice

Web | React (React DOM) + TypeScript + Vite

Mobile | React Native via Expo + TypeScript (native screens - not a WebView of the web app)

Shared | Firebase backend + shared types/contracts only (do not fork business rules)

Not allowed | Flutter; do not ship mobile as "wrapped website" only

Backend | Firebase Auth, Firestore; Functions/Storage as needed

Mobile binaries | EAS Build -> Android .apk/.aab, iOS .ipa

First module | Follow-Up

Org start | Single org MVP (ieec\_ya / Firebase project ieec-ya-connect if present - confirm before touching prod)

Engines vs Modules: shared engines (engines/) + business modules (modules/follow-up/). Do not duplicate Person, calendar, chat, workflow, forms, or RBAC inside Follow-Up.

---

## ACCESS MODEL (must implement)

---

- Ministry status != system role != org position != team role != oversight != volunteer
- Person != User Account (newcomers register without login)
- Roles = scoped live permission templates (ADR-RBAC-001/002)
- Assign role -> receive all template permissions in that scope
- Exceptions = permission overrides (grant/deny); deny wins
- Time-bound assignments: optional start/end + active/inactive (ADR-RBAC-003)
- Default deny; audit permission and status changes
- UI gates + Firestore Security Rules (hiding buttons is not security)

### Follow-Up role defaults

Role | Default

Follow-Up Leader | Full Follow-Up management permissions in team scope

Follow-Up Assistant Leader | No management permissions by default

Follow-Up Minister | Assigned-work only (report, attendance, bio, recommend)

Canonical keys: plural resources (follow\_up.assignments.\*, follow\_up.reports.\*) - see permission catalog.

---

## IMPLEMENTATION ORDER

---

### Phase A - Platform foundation (web + shared backend)

1. Monorepo or clear workspace: web (Vite React) + mobile (Expo) + shared packages for types/contracts
2. Firebase Auth email/password
3. Firestore: organizations, people, userAccounts, roleTemplates, roleAssignments, permissionOverrides, auditLogs
4. Session: Auth UID -> userAccount -> Person -> effective permissions for active org
5. Admin (web-primary): manage templates, assign roles (scope + dates), overrides
6. Audit writes for permission/status-changing actions
7. Seed Super Admin / Head Leader bootstrap documented in README

### Phase B - Follow-Up module

1. Public newcomer registration (no account)

2. Duplicate review (no auto-merge)
3. Journey + unassigned queue
4. Assign / reassign (primary/secondary; warn if already assigned; keep history)
5. First-contact task (default 48h) + weekly contact responsibility
6. Weekly report (form definition + version; Friday due / Sat+ late; 7-day edit window)
7. Attendance separate from report: Saturday 6:30 PM-9:30 PM calendar event; statuses attended \| did\_not\_attend \| unknown; unique personId + calendarEventId
8. Newcomer profile: history, report, attendance, bio
9. Permission-driven leader dashboards
10. Membership recommendation + configurable approval (example: Minister -> Leader -> Core Team)
11. Journey pause / unable\_to\_contact / inactive / close / reopen

Exact workflows: docs/modules/follow-up-workflows-and-state-transitions.md

Exact collections: docs/modules/follow-up-firestore-data-model.md

## Phase C - Mobile parity (Expo)

1. Expo app wired to same Firebase project
2. Sign-in + permission-resolved session
3. Minister flows: assigned newcomers, weekly report, Saturday attendance, bio, basic profile
4. Push/in-app notifications for tasks/reminders where practical
5. Document eas build for Android/iOS in README

Admin/config may remain web-primary for v1; minister ops must work on mobile and web.

---

## NON-NEGOTIABLE RULES

- Report != attendance (different records)
- One org calendar; Saturday program via calendarEvents
- Attendance informs membership readiness; never the only factor
- No auto-promote to Member by time alone
- Soft delete + history (ADR-006)
- Public registration never exposes internal/admin fields
- Members normally get account invitation after membership approval (not silent auto-passwords)
- Chat membership != team membership (ADR-004)

## Config defaults (admin-editable later)

Key area | Default

Report due | Friday (org timezone); Sat+ = late

Edit window | 7 days

First contact | 48 hours

Welcome message | On

Primary reports only | true

Attendance | On (Saturday model)

Full table: docs/modules/follow-up-config-defaults.md

---

## OUT OF SCOPE (first milestone)

- Full parent-org / denomination product
- SMS / WhatsApp providers
- Flutter
- Other ministry modules beyond hooks (Bible Study, G5, Worship, ...)

- Redesigning RBAC or Follow-Up "improvements" not in the docs
- 

## ENGINEERING STANDARDS

---

- TypeScript strict (web + Expo)
- Folder split: engines/\* vs modules/follow-up/\* + shared contracts package
- Business rules enforced in Security Rules / trusted Functions - not UI-only
- Prefer extending engines over module-local duplicates
- Small commits; no secrets in git
- Confirm Firebase project with human before overwriting production

### Mobile release

```
eas build --platform android -> .apk / .aab  
eas build --platform ios -> .ipa
```

Needs Apple Developer + Google Play accounts. Details: handbook Ch. 13 §13.8.1.

---

## DEFINITION OF DONE

---

- [ ] Sign-in + permission session on web and mobile
  - [ ] Admin can manage roles / assignments / overrides (web OK for v1 admin)
  - [ ] Public registration -> Person + journey + duplicate review path
  - [ ] Leader/assistant (with permission) can assign newcomers
  - [ ] Minister submits weekly report and Saturday attendance separately on web and mobile
  - [ ] Newcomer profile shows history / report / attendance / bio on both clients
  - [ ] Security rules block unauthorized access
  - [ ] Audit for assignment, status, permission, membership actions
  - [ ] README: setup, seed, web + Expo run, EAS build notes
- 

## HOW TO START (mandatory)

---

1. Read the docs listed above end-to-end
2. Propose a short implementation plan (Phase A -> B -> C) - no architecture redesign
3. Wait for human approval of that plan
4. Implement Phase A, then B, then C
5. Ask when docs are silent - never invent policy

Begin now by confirming you read docs/SOURCE\_OF\_TRUTH.md and listing your Phase A plan for approval.
